Executive summary

This report will provide a description of the specific tasks that require further analysis. Please, note that the simpler requirements might not need a special treatment. On the other hand, the more complicated ones may need a deeper analysis to ensure clear understanding.

Please, take into account this document covers the individual requirements for Student #2 exclusively. The team requirements assigned to Student #2 are considered in the group analysis document.

Revision Table

Date	Version	Description of the changes	Sprint

Introduction

For the last delivery Student #2 was expected to carry out two mandatory tasks and two optional assignments.

The mandatory tasks requested the production of testing suites for the features related to the role Client and the corresponding testing report.

With respect to documents, the Analysis and Planning Report are demanded as usual.

In the document, we'll list the mandatory tasks first, then the optional ones. Each task will have a number, its official description, and a detailed analysis if needed, as mentioned in the Annexes document.

Contents

No further analysis required.

No further analysis required.

No further analysis required.

No further analysis required.

Conclusions

Although delivery number four didn't require extensive requirement analysis, it presented its own set of complexities. Through diligent testing efforts, we identified errors in several feature codes. After addressing these bugs, we enhanced the code by incorporating indexes. For more detailed information, please refer to the testing report.
